

HSGM hot knife holder

When used in conjunction with a Sabre series 2, the holder provides HSGM hot knife users with a safe, quick and accurate means of cutting and sealing synthetic fabrics. The simple-to-attach hot knife holder includes features such as spring loaded mounting block for easy mounting to the cutter's slideway and a spring loaded trigger to automatically activate the hot knife when depressed. The hot knife holder uses a bearing and slide system designed for silent operation, user adjustment and minimal maintenance.

There is a different holder to suit the AZ hot knife (HOTAZ).

Use only with the following Keencut Machines:

- Sabre Series 1 & 2
- Sabre HotCut
- Evolution Series 1 & 2
- Javelin Integra
- Javelin Series 1 & 2 when mounted to a Big Bench only
